

IoT connectivity E2E testing

Validate your IoT connectivity requirements.

- **Detailed test plan creation and execution for validating each individual requirement end-to-end, including:**
 - IoT end-device with application on top
 - IoT gateway with sensors
 - Connectivity management platform
 - Device management platform
 - SIM applet specifics
 - Network connectivity specifics per RAT
- **Risk assessment and troubleshooting for observed issues**
- **Proposals for corrective actions in alignment with R&D teams**
- **Regression testing to validate successful corrections**
- **Final GO decision for your IoT rollout**
